

the base station which, after receiving the information, interrupts the transmission of the poor-quality signal.

16. (Amended) A radio system as claimed in claim 11, **characterized** in that if the quality of the signal received by the subscriber terminal is below the lowest acceptable quality level, the subscriber terminal (200) sends information on the quality of the above-mentioned signal to the base station which, after receiving the information, stops transmitting the signal with the antenna by which the signal that was below the threshold was transmitted.

Please see the attached APPENDIX including the changes made to provide the above-claims.
